Your bed for optimum care at home

# Dali – the bed series for the care of the future

Care at home is the foundation of care in general in our society. That gives technical development of care equipment a crucial role. Increasingly easier operation and the networking that comes with digital assistance systems can alleviate stress caused by insufficient numbers of care staff and by the social isolation that many older people experience.

Our Dali bed series has been dominating home care in Germany and Europe for years. Now we are setting the direction for the future. With digital control and our practical assembly system, Easy Click, our Dali models relieve staff at medical supply stores as well as the carers working at home or in care homes.

Residents and carers enjoy great convenience, can live in their trusted home environment and feel more safe in general with Dali beds from Burmeier. Medical supply stores benefit from the fast assembly, optimal hygiene with validated automated reprocessing and digital networking.

The name Dali is, and will continue to be, synonymous with beds that people can trust.

## Contents

- 2 Model variants
- 4 Dali
- 6 Dali wash
- 8 Dali economic
- 10 Dali low-entry
- 11 24 volt drive system
- 12 Easy Click system
- 14 Wireless handset
- 16 Mattresses
- 18 Softcovers
- 19 Accessories
- 22 Equipment and options
- 23 The Stieglmeyer Group

### Dali

- **Height adjustment range:**  
40 – 80 cm
- **Sustainable, comfortable and safe:**
  - Safety sides are mounted in seconds with Easy Click
  - Wireless or cabled handset
  - Optional homelike wooden surrounds

### Dali

with 100cm wide mattress base

- **Height adjustment range:**  
40 – 80 cm
- **More comfort in home care:**
  - 100 cm wide mattress base gives the resident more space
  - Wired handset
  - Safety sides are mounted in seconds with Easy Click

### Dali wash

- **Height adjustment range:**  
40 – 80 cm
- **Automatic reprocessing for ideal hygiene:**
  - CDP coating protects against corrosion
  - Protection and relief for medical equipment staff and home carers
  - Lower processing costs through automation and quicker re-use

### Dali economic

- **Height adjustment range:**  
40 – 80 cm
- **Configurable and economic:**
  - Choose between two standard configurations or configure your own Dali economic
  - Can be used in many settings thanks to the configuration
  - Absolute lightweight: Maximum weight 15 kg of each individual bed part

### Dali low-entry

- **Height adjustment range:**  
23 – 63 cm
- **Low-height bed for fall prevention:**
  - Low entry at only 23 cm protects against injury from falls without needing deprivation of liberty safeguards
  - Safety sides with Easy Click
  - Cabled handset

**NEW**

Dali with 100 cm mattress base for more comfort

◀ The wireless handset allows residents and carers to operate the bed effortlessly.

▲ The comfortable sitting position makes it easier to breathe and lowers the risk of pulmonary aspiration during meals.

▼ The brakes can be conveniently operated even in slippers.

▼ The safety side bars can be attached or removed without tools using the Easy Click system.

*Dali*

Fast and digital

The Dali is Germany's best-selling care bed thanks to its innovative technology and longevity. It is a robust and low-maintenance bed made of high-quality materials.

The 4-section mattress base can be operated conveniently by a **wireless handset** that is networked with the bed per Bluetooth. Thanks to the reverse-Trendelenburg feature included as standard, the bed can be adjusted to a healthy **sitting position** for eating or watching TV. If the carer wishes to block certain positions for the resident, this can be effortlessly achieved with the help of the handset.

The full-length safety side easily slips into place onto the pre-assembled brackets with the **Easy Click system**. That makes setting up the bed significantly easier.

## Strong Advantages

- Safe working load of 185 kg
- Foot brake with comfortable feel, can be operated in slippers or socks as well
- Wireless handset has very long use cycle, minimal servicing requirement for all operators of the bed
- Cabled handset option
- Easier and faster assembly using the Easy Click system
- Adjustment of the lower leg rest is available as an optional feature for all Dali models
- Available in the short variant with a bed length of 180 cm

Exterior dimensions/Height adjustment range:

Product special features:

▲ If required, an environmental control unit and mounting bracket can be installed on the Dali.

Safe hygiene and the fight against multi-resistant germs are becoming more and more important in care at home. Machine washable beds offer strong advantages here. They ensure **ideal cleaning and disinfection** with validated processes. At the same time, they save the operator time and money, since the time-consuming and arduous manual reprocessing by the staff of the medical supply company is no longer necessary. The bed can go back into circulation faster and unnecessary downtime is avoided.

The Dali wash was designed for cleaning in automatic washing systems. The bed can be reprocessed without disassembling the drive system because of its **IPX6 protection**. With its **CDP coating**, this bed is ideally protected inside and out against corrosion. CDP stands for “cathodic dip painting”, an electrochemical painting process for maximum durability. Special drill holes allow residual water to drain off fully after the washing procedure.

### Strong Advantages

- Safe working load 185 kg
- Full-length safety sides with Easy Click system
- Wireless handset
- Reverse-Trendelenburg included

Particularly high level of hygiene

## Dali wash

The bed for optimal hygiene

Exterior dimensions/Height adjustment range:

Product special features:

▲ The CDP coating protects the bed inside and out from corrosion.

▲ Drill holes in the metal surface allow any residual fluids to drain away.

▲ Plastic square plugs with drill holes allow residual moisture to escape.

▲ Sealed surfaces are ideal for safe and thorough cleaning.

▲ The 4-section mattress base has hygienic metal support bars. Also available with sprung wooden slat.

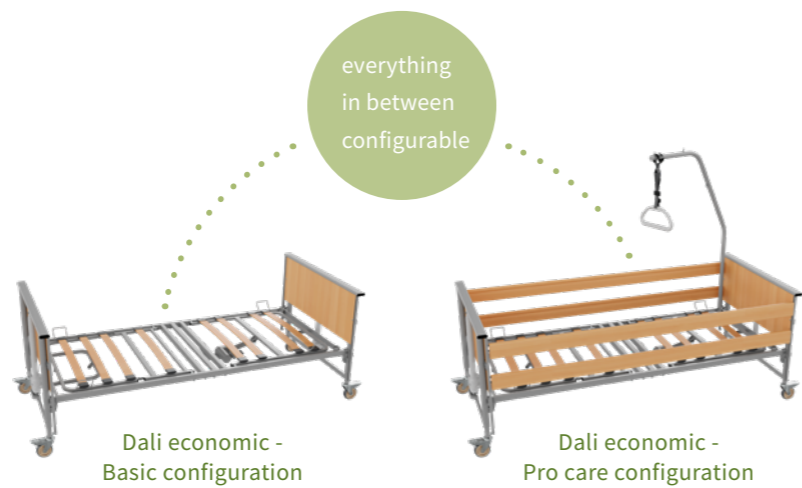

# Dali economic

The new generation in homecare

This innovative homecare bed is designed to adapt effortlessly to individual needs, offering two readily available stock versions with short lead times or the ability to configure a bespoke solution tailored to specific requirements.

The Dali economic stands out as an absolute lightweight, ensuring effortless maneuverability and assembly. Discover the perfect blend of comfort and functionality with the Dali economic homecare bed – where every detail is crafted with your well-being in mind.

## Strong advantages

- Choose between two standard configurations or configure your own Dali economic
- The four-bed-stack saves freight costs and reduces the carbon footprint at the same time
- With only 83 kg in the “pro care” configuration, it is an absolute lightweight! Maxium weight 15 kg of each individual bed part
- Easy to assemble and set up
- Safe working load of 185 kg

Exterior dimensions/Height adjustment range:

Product special features:

## Handsets

Depending on the configuration, the appropriate handset can be selected. The „basic“ and „pro care“ versions are already equipped with a suitable handset. Additional handsets can be ordered as accessories for both versions.

## How to configure

Choose between our two on-stock versions for short term delivery or configure according to individual requirements.

## Four-stack with strong advantages:

- Sustainable and cost saving logistic
- Unique solution designed by Burmeier

Entry height of only 23 cm to prevent falls

## Dali low-entry

### The low-entry bed

The low height of the bed reduces the risk of injuries from falls.

Safety sides provide protection against falls – but if they are used permanently, this liberty depriving measure can reduce the care patient's quality of life.

**Low-height beds**, such as the Dali low-entry, are an excellent alternative. With its height adjustment range of **23 to 63 cm**, it is very close to the floor when at its lowest position. From this low height, the risk of injury is much lower in the event of a fall. This makes it easier to decide not to use safety sides. This is Burmeier's way of following the **Werdenfelser approach** of maintaining the resident's mobility.

The Dali low-entry also benefits from the advantages of the Dali family, such as the reverse-Trendelenburg position, as standard, and a cabled handset with selective blocking.

Exterior dimensions/Height adjustment range:

Product special features:

- Safe working load of 175 kg
- Progressive height adjustment for ergonomic and comfortable entry and exit
- 24 volt system – no leakage current measurements during the expected service life

The SwitchMode voltage transformer produces a protective low voltage of 24 volts directly at the socket.

## 24 volt drive system

Burmeier's 24 volt drive system provides an ideal safety standard for caring for people at home. All live 230 volt components are safely housed away from the bed. Immediately downstream of the mains plug is a housing containing the **SwitchMode** electronic voltage transformer. This means that residents enjoy a very high level of safety.

The bed has no current-carrying components except when the handset is in use. Even more costs and effort are saved by the fact that leakage current measurements, certified by **TÜV Rheinland**, in Europe not longer necessary. When care beds are being commercially used, the required leakage current measurements must be performed every 2 years.

The use of the 24 volt system prolongs this interval to such an extent that measurements are not necessary at all within the expected service life of the bed. The applicable service life is given in the operating instructions.

Leakage current measurements are not even required when putting the bed into service for the first time, as this has already been taken care of in the factory. In Europe, there is also no need for **an electrically trained person** to be involved in assembling the bed – this saves the bed operator additional costs.

### SAFE LIVING AT HOME

## Strong Advantages

- Protective low voltage from the transformer at the wall socket
- No 230 volt carrying components on the care bed
- No leakage current measurement after assembling or during the expected service life of the bed
- A test certificate is available for downloading for every bed

## The Easy Click system

▲ The safety side bars can be attached or removed in seconds using the Easy Click system.

The full-length safety sides on the Dali series are easy to operate and offer an excellent protection. Even the assembly has become much easier. With the Easy Click system, the 4 bars can be **attached or removed in just seconds**. At the same time they are so securely and sturdily attached that even agitated care patients are protected at all times and cannot unintentionally remove them.

The holding brackets are already pre-assembled on the foot and head parts of all Dali beds. The safety side bars simply need to be “clicked” securely into place. If they are to be removed again, there is a small release slider in the bracket. The sliders are attached in such a way that it is impossible for residents to remove the safety sides unintentionally. The ends of the bars are protected by elegant anthracite-coloured plastic caps.

The Easy Click system makes assembling beds significantly easier for medical equipment suppliers, family carers and care facility workers, and it **saves a lot of time**. The carers can remove the safety side similarly when the resident no longer needs them. There is also a practical bag for transporting and storing the bars which is available as an accessory.

▲ The full-length safety side provides optimum protection.

## Easy to assemble

▲ The holder mechanism for the safety sides is already pre-installed. This saves a lot of time during assembly. Without the safety side, the holders remain unnoticeable at the lowest position on the bed.

▲ When in the diagonal position, the bars offer the person in need of care good spatial orientation.

## The wireless handset

▲ The wireless handset can be intuitively operated.

Greater comfort and freedom of movement are the strengths of the wireless handset. In the bed and in the care room, it is always exactly where you need it. The stable connection with the Dali, via Bluetooth, ensures safe and reliable working.

The wireless handset is hooked onto the safety side, as usual, where it is always to hand. Using the handset, carers can block or unblock some or all of the adjustments for the resident. This involves holding the included magnet against the controls and pressing the function you want to block.

### Strong advantages

- Easy operation from both inside and outside the bed; the range is not restricted by prescribed cable lengths
- Easy to understand pictograms with good contrast make the handset easy to use
- The handset can be positioned at any point along the safety side
- The battery will last for two years if the handset is operated for around 140 seconds a day

### SAFE LIVING AT HOME

#### Handset with cable

Our goal is to create beds that are tailored to your requirements. This is why we now offer the cabled handset again as an option for the Dali. Here, a key is used to block selected functions.

Dali low entry, Dali v. economic and Dali with 100 cm mattress base are only available with the cabled handset, whereas the Dali wash always comes with the hygienic wireless handset.

As soon as the battery needs replacing, a light signal goes on.

▼ Commercial batteries can be replaced in just a few seconds.

▲ The adjustment positions of the bed can be selectively locked and unlocked using a magnet.

The handset can be hung from the safety side and is within easy reach at all times.

Available for  
mattress base dimensions:

**Sky-fit**  
90 x 200 cm  
100 x 200 cm

**Comfort-fit**  
90 x 200 cm  
100 x 200 cm

**Basic-fit**  
90 x 200 cm  
100 x 200 cm

## Mattresses

For comfort, day and night

If people being cared for spend long periods in bed, original Burmeier mattresses offer an ideal combination of comfort and prevention. They are precisely tailored to the mattress base sections and accommodate every movement. When the backrest and thigh rest are adjusted, they therefore provide ideal pressure relief. The Sky-fit and Comfort-fit models are also reversible mattresses with one smooth side and one side with incisions. As a result, these mattresses are never "too hard" or "too soft" – they can simply be turned over and offer two different lying sensations.

▲ Sky-fit model with high-quality Skytherm® top layer.

### Sky-fit – the premium model

- High-quality dual-layer mattress with a 2 cm-Skytherm® top layer and a 12 cm cold foam base layer
- Incisions in the base layer ensure it optimally adapts to the mattress base
- Both sides can be used for lying on
- Reinforced edge zones allow users to sit comfortably on the side of the bed
- Removable reversible cover, one side polyurethane (PU), the other side polyester and viscose, which can be washed in a standard washing machine
- Compression hardness 5.0 kPa (edge zones), 4.0 kPa (base layer), 2.5 kPa (top layer), density 50 kg/m<sup>3</sup> (base), 40 kg/m<sup>3</sup> (top)

▲ Comfort-fit model with edge-zone reinforcement.

### Comfort-fit – the mid-range mattress

- The comfortable mattress with a core made of resilient polyurethane cold foam (14 cm)
- Incisions in the base layer ensure it optimally adapts to the mattress base
- Both sides can be used for lying on
- Edge zone reinforcement protects against rolling out of bed
- Removable reversible cover, one side polyurethane (PU), the other side polyester and viscose, which can be washed in a standard washing machine
- Compression hardness 5.0 kPa (edge zones), 4.0 kPa (base layer), density 40 kg/m<sup>3</sup>

▲ Basic-fit model.

### Basic-fit – the entry-level model

- Single-layer mattress made of cosy polyurethane (12 cm)
- White removable PU cover, can be washed in a standard washing machine
- Compression hardness 4.5 kPa, density 40 kg/m<sup>3</sup>

Comfortable elegance with wooden surrounds

The Dali bed head and footboards can be covered with **wooden surrounds**. These high-quality design elements hide the mechanics of the bed and provide an even more homelike, private look.

## Softcovers

Softcovers are made from high-quality materials and can **easily be cleaned** in the **washing machine** at home. They are environmentally friendly in compliance with Öko-Tex Standard 100.

You can find your individual Softcover using the **Softcover configurators** on our website.

One feels immediately much more comfortable in a beautiful bed that blends with the interior design of the room. Our Softcovers transform the Dali series into elegant designer beds. Softcovers are stylish **fabric covers** that fit easily over the head and foot boards and can even be attached to the safety side. Choose from **6 attractive** colours: petrol, dark blue, vanilla, lavender, bordeaux and brown.

## Practical accessories

Even the standard versions of the Dali beds offer excellent comfort and convenience. But, by using the original accessories from Burmeier, the comfort, protection, mobility and look of the beds can be considerably enhanced. Bed users can enjoy serving trays and reading lamps to make **every day more pleasant**. Simple installation and direct shipping make the accessories a natural companion.

▲ The **bed extension** offers tall people the space they need to feel comfortable. It can also be installed retroactively. Safety side bars are also available in 220 cm lengths that fit with the bed extension.

▲ The **clamp-on bar** for increasing the height of the safety side can remain attached to the bed at all times.

▲ The **metal safety side** is particularly sturdy and easy to clean.

▲ A **reading lamp** provides a pleasant light.

▼ The optional **ratchet mechanism** allows the lower leg rest to be manually adjusted.

▼ The bars of the safety sides can be transported and stored even more easily with the **carrying bag**.

◀ The **mobilisation aid** helps residents to leave the bed easily and independently.

▼ The **servicing tray** is simply placed on the raised bar of the safety side.

▲ The **'Duo' overbed table** is ideal as a storage area and comfortable book rest.

▼ Soft, **foam leather covers** protect residents from contact with the safety sides and when they leave the bed.

▲ **Bedside cabinets** from Burmeier provide storage space and a practical area for utensils and beverages. The Cherusker model with adjustable height and swivelling overbed table is shown here.

▲ **Wall deflector rollers** protect the bed and the walls from damage.

▲ An **extension cushion** can be put on the full-length safety side to make sitting on the side of the bed easier.

▲ With the **power pack**, the 24 volt system can be used with various international mains cables (A, G, I, C Euro flat).

▲ The **adaptable safety side** for the Dali offers a lot of protection while still leaving ample space for getting into and out of bed.

▲ Thanks to its excellent manoeuvrability, the **Pleto server** is extremely versatile.
